# Wool

OUR DNA

OUR PASSION SINCE MANY YEARS

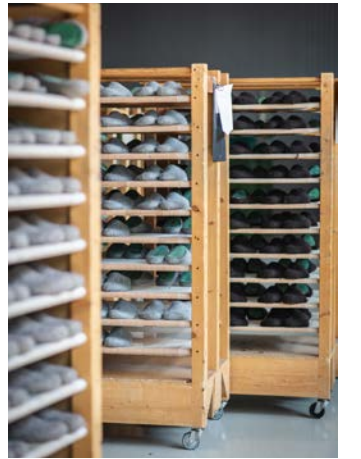

Since 1926 wool is our passion and the basis  
for manufacturing our natural slippers.

## INTRODUCTION

As a traditional family business from Austria, we have always been working with natural materials. Our slippers are pure nature. For the upper, we use finest merino wool, special wools from endangered sheep breeds in Europe and premium wools such as alpaca and yak. We process and shape these wools in pure mountain water to create the most natural slippers in the world: Magicfelt and Stegmann.

Magicfelt and Stegmann stand for quality felt slippers made of special wools such as merino wool, tyrolean stoneweep and tyrolean mountainsheep, alpaca, camel, yak and many others. Our line is made of natural, undyed wools from endangered sheep breeds. The wool from eight endangered sheep breeds has already been part of our collection to support the local shepherds. In a special process, the slippers get seamlessly felted in pure mountain water and refined with a premium sole of cork, leather or rubber. Either the felt and the sole are anatomically shaped and adapt perfectly to the foot. The comfortable slippers combine Tyrolean craftsmanship with modern design and highest quality standards.

The entire production takes place in our manufactory in Ötztal-Bahnhof in Tyrol. Fifty employees process our wools into unique and natural slippers.

Wool is a highly complex natural fiber only a few companies really can handle. This expertise is constantly being improved and aligned with new goals. Our development focus is currently on becoming even more sustainable and environmentally conscious. Local farms, short transport routes and untreated processing are key for us. Because of new recycling machines, wool waste can now be recycled. Through energy-efficient machine settings and the optimization of the utilization of the production equipment, we can continuously minimize the environmental impact.

# Wool

## WHAT YOU SHOULD KNOW ABOUT THE WOOL FIBRE

### FELTING PROPERTIES

Wool felts by adding heat, moisture and agitation. Wool fibers have tiny microscopic scales along their surface. When wool fibers are shocked by temperature and rubbing the little scales lift up and as the fibers rub against each other they lock down on nearby fibers and form a tighter and tighter mass that´s how wool felts.

MEDULLA  
CORTICAL  
CELL  
CUTICULAR  
SCALE

### FELTED WOOL FABRIC

The base for felted wool fabrics is a knitted fabric made of wool yarn which is washed with pure water and moderate heat. During this wet process the fabric changes its structure and it shrinks. If you compare a felt made of raw fibres with a felted wool fabric, the fabric is much more elastic.

### PROPERTIES OF WOOL

#### Moisture absorption

The wool fibre can absorb 30% in moisture of its own weight without feeling wet.

#### Stretchability

Wool fibres are highly elastic and after stretching regain their original dimensions. Therefore, wool fabrics are wrinkle free.

#### Deformability

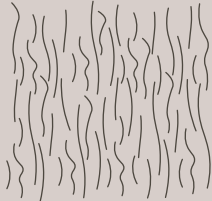

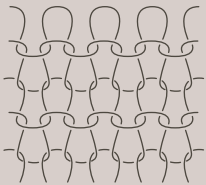

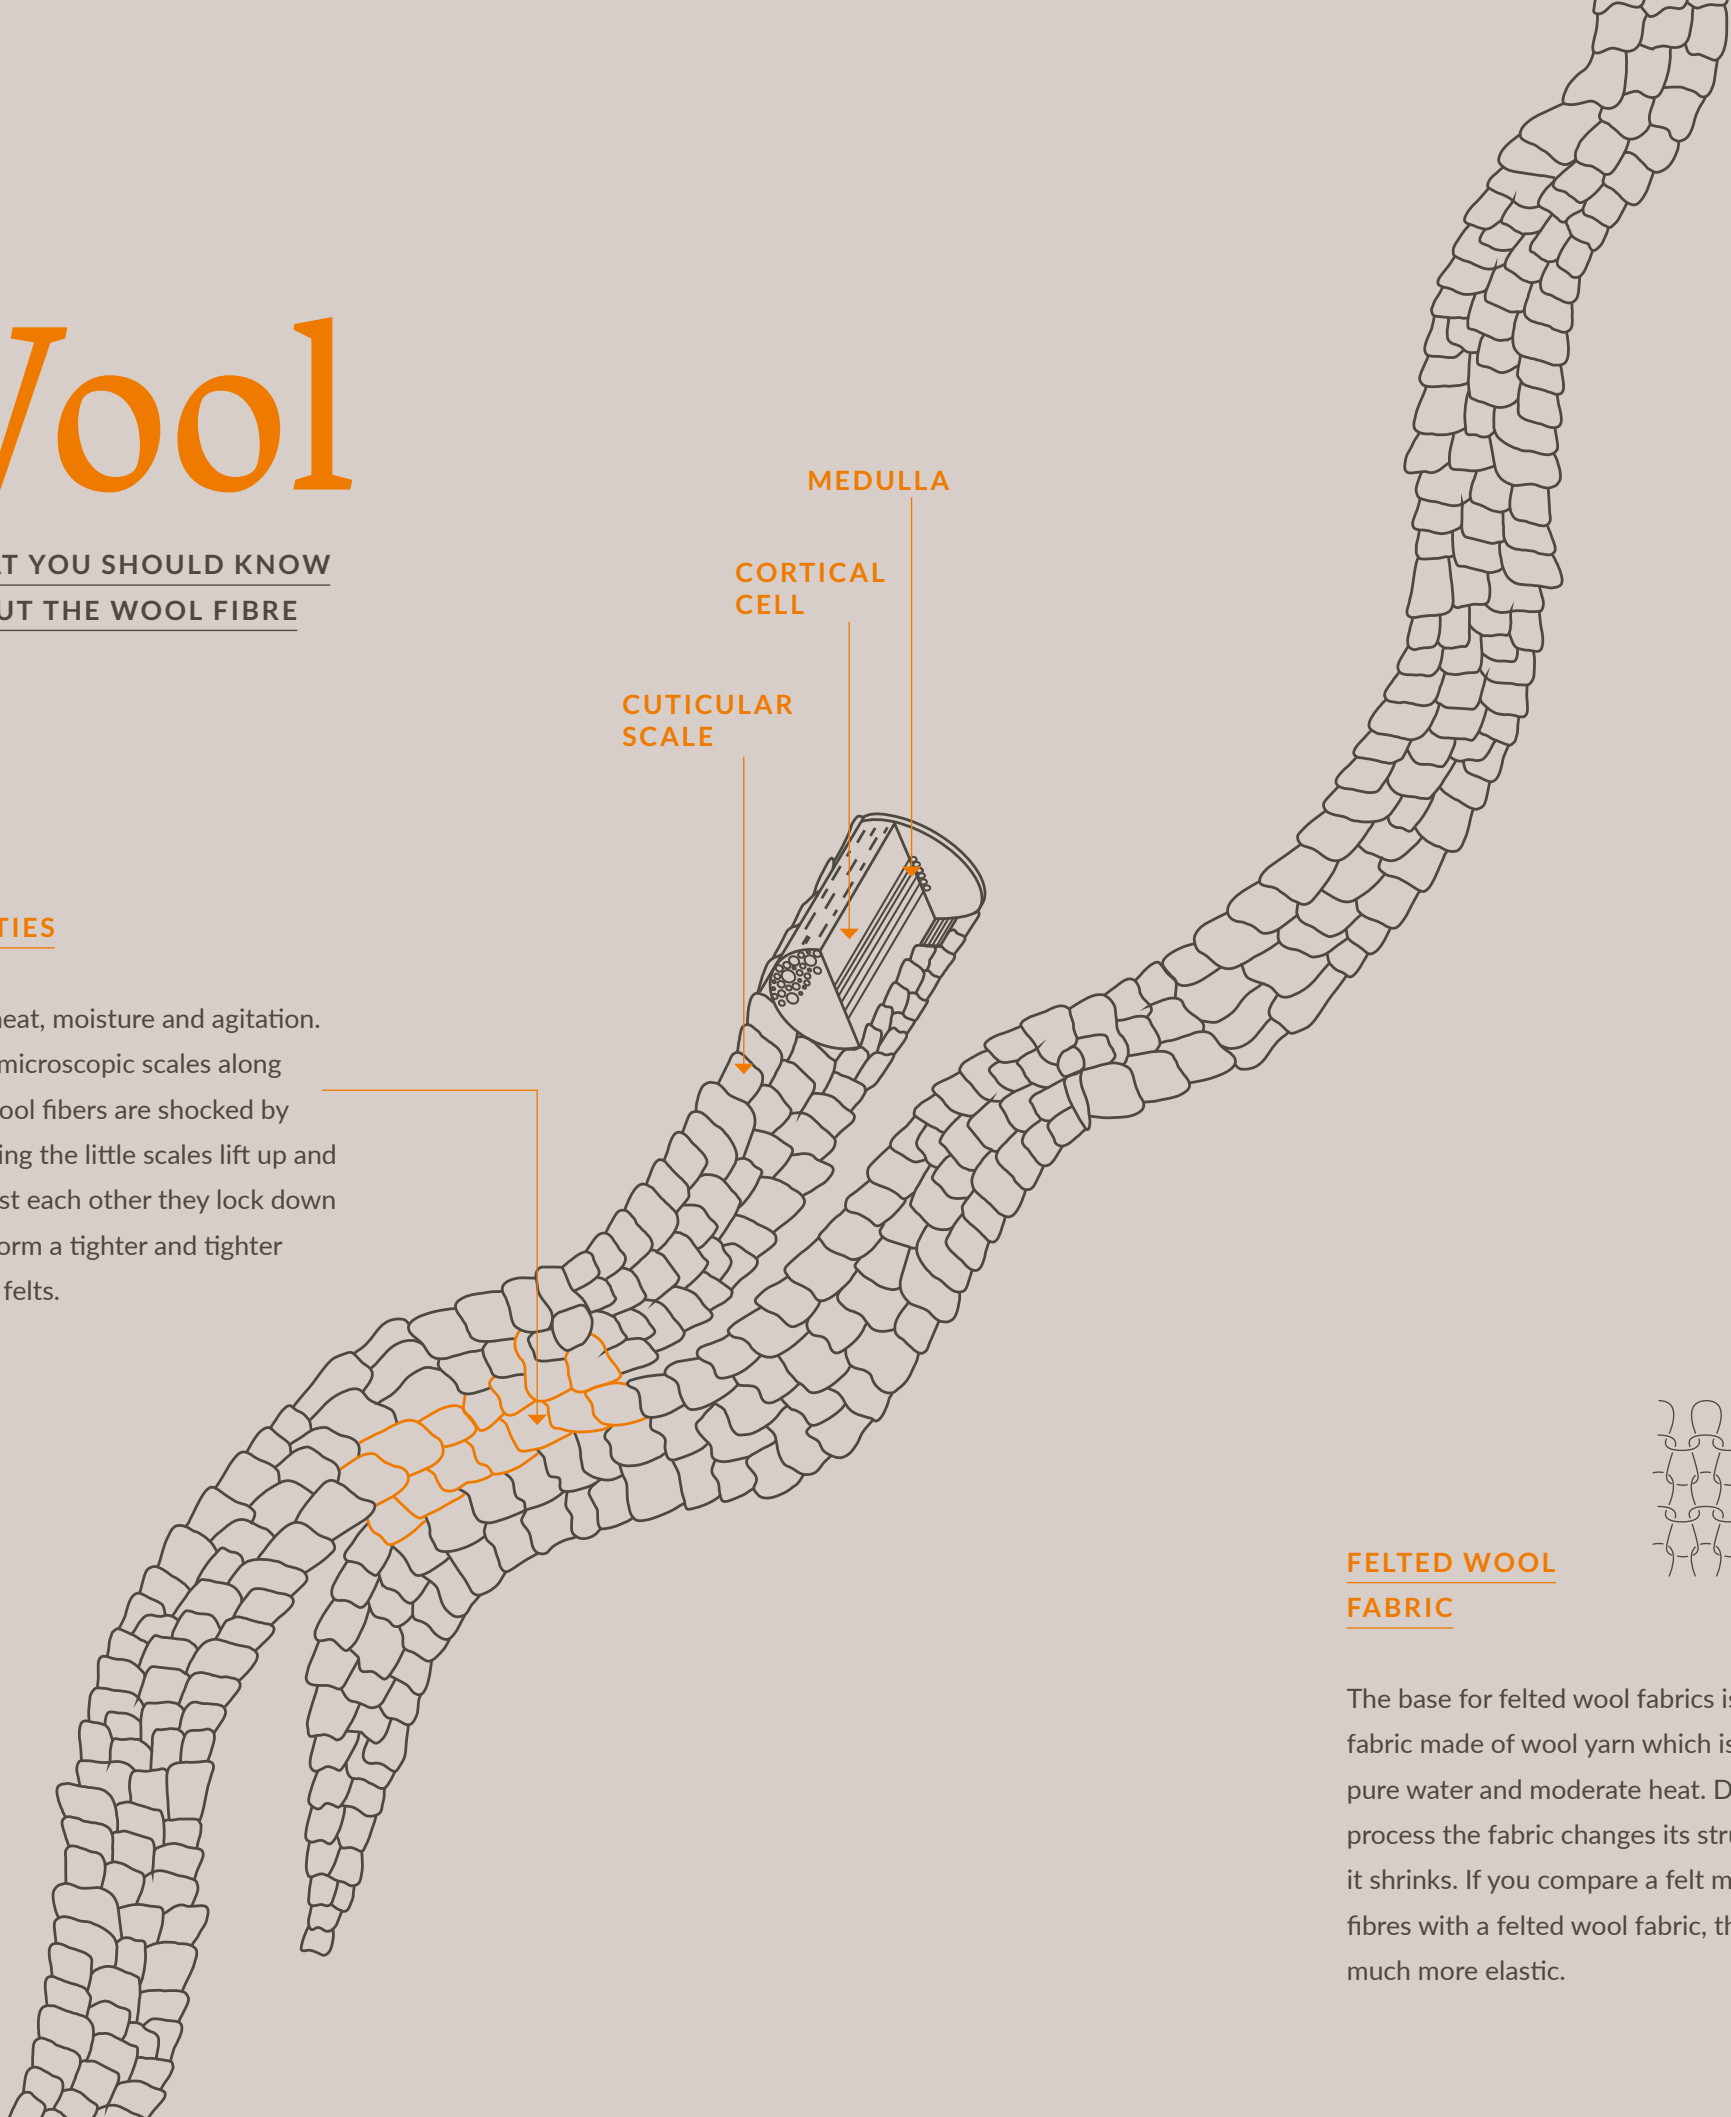

Wet wool fibres can be formed by using water, temperature and agitation. We use exactly these properties to make our felt slippers.

#### Heat retention

Wool regulates body temperature. In the winter wool insulates and in summer it pulls extra heat from the skin.

### FELT

Felt is made by matting, condensing and pressing raw wool fibres together. First the fibres need to be put in an order. With pressure and heat they can be fixed in any shape. Felt is very durable, light and warm.

01. SOURCING

# Sourcing & processing the natural fiber wool.

ABOUT THE ORIGINS OF OUR  
WOOLS AND THE PROCESSING TO  
CRAFT OUR SLIPPERS

02. PROCESSING

THE COUNTRIES OF ORIGIN

Most of the wool for our natural felts is sourced from regional sheep farmers in Europe. For particularly fine qualities, we also source merino, alpaca, yak and camel fibers.

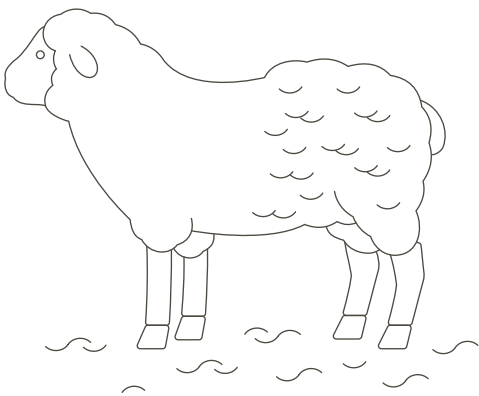

6.

REFINING

The slipper is finished with a sole made of felt, cork, leather or natural rubber. Every shoe that leaves our production is checked by our staff.

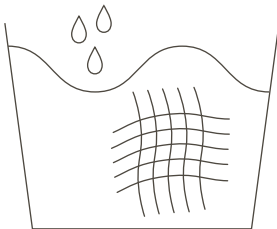

1.

SHEARING

Sheep are sheared twice a year.

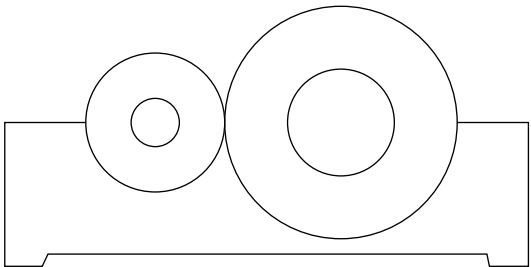

2.

WASHING

After the shearing, the wool gets thoroughly washed to remove dirt and impurities.

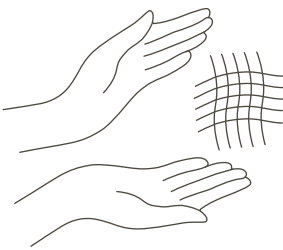

3.

HAND-PICKING AND PREPARATION

Each wool is picked by hand and mixed according to special recipes and prepared for felting.

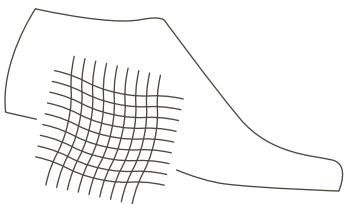

4.

FELTING

The wool is felted and formed in pure mountain water by our master craftsmen.

5.

3D - SHAPING

Using unique technology, each slipper is seamlessly felted around the shoe last and anatomically shaped.

# The processing of our wools

WOOL CAN DO SO MUCH MORE THAN YOU THINK

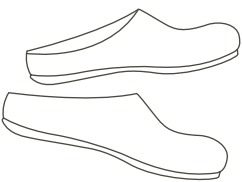

# Rare Wools

INSPIRED BY MOTHER NATURE

Slippers made of the wools of endangered sheep breeds from Europe. We support regional shepherds to preserve rare sheep breeds. This picture shows our shepherd Clemens Schnegg and his Tirolian Stonesheep.

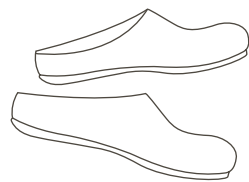

# Tyrolean Stonesheep

One of the oldest sheep breeds worldwide. The breed derives from the Neolithic Torfsheep and is native in Tyrol. With its warm and resistant coat, a combination of coarse upper and fine under coat, these animals brave the harshest weather. The wool impresses by its silky brightness. The Tyrol Stone Sheep is, due to its low number, acutely endangered. There are only about 6.000 sheep left.

WOOL FROM THE TYROLEAN STONESHEEP / ANATOMICALLY SHAPED / UNDYED

# Tyrolean Mountainsheep

The cross-breeding of the Tyrol Stone Sheep and the northern Italian Bergamasker Sheep breed feels absolutely comfortable in the harsh, alpine mountain climate. Natural colours characterize the wool.

17713-4852 Mountainsheep  
leather sole, Sizes 36-46

17719-4852 Mountainsheep  
felt sole, Sizes 36-46

# Swiss Jurasheep

This breed is native in the French part of Switzerland and derives from the Frutig Sheep breed. The wool of this mountain sheep has a particularly fine, nearly merino-like quality.

17713-4851 Jurasheep  
leather sole, Sizes 36-46

17719-4851 Jurasheep  
felt sole, Sizes 36-46

# Shetlandsheep

These sheep come from the harsh Shetland Islands located in the sub-Arctic Atlantic ocean to the north of Scotland. They are small, undemanding and extremely resilient shorttailed sheep. The fine, soft, curly wool comes in many natural colour variants, from which we have chosen „moorit“ – a very warm, light brown variety.

48402-4856 Shetlandsheep  
Sizes 36-46

# Gotlandsheep

In Gotland, there are still approximately 9.000 thoroughbred Gotland sheep – a very traditional and special breed of sheep. Rams and ewes have mighty horns, and their wool is flecked with grey and it’s very soft. Even the Vikings traded the wool and pelts of Gotland sheep.

17719-4854 Gotlandsheep  
felt sole, Sizes 36–46

17737-4854 Gotlandsheep  
rubber sole, Sizes 36–46

# Coburger Foxsheep

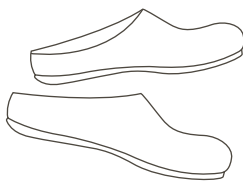

A robust land sheep breed. The speciality of this wool is its reddish brown colour: When they are born, the colour can be from goldish yellow to reddish brown (Golden Fleece); over the years it brightens up but it always keeps its reddish brown shimmer. Current animal population: only some thousand sheep.

WOOL FROM THE COBURG FOXSHEEP / ANATOMICALLY SHAPED / UNDYED

17713-4853 Foxsheep  
leather sole, Sizes 36–46

# Moorschnucke

This is one of the oldest sheep breeds in central Europe and has been living in moors and marshlands. This is why – in contrast to its fellow species – this sheep can swim. It has a pure white coat with long, rough upper coat that hardly felts and fine under coat. The Moorschnucke was considered almost extinct and was added to the „red list“ of the IUCN (World Conservation Union). Meanwhile there are again, due to breeding, 5.000 animals.

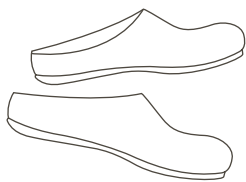

WOOL FROM THE MOORSCHNUCKE / ANATOMICALLY SHAPED / UNDYED

17713-4855 Moorschnucke  
leather sole, Sizes 36–42

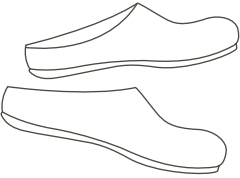

# Alpaca

The alpaca stems from the camel and comes from the South American Andes. It was considered as a sign of prosperity by the Inca. Alpaca wool is very soft and has a silky brilliance. Compared to sheep wool, it is 3 to 5 times warmer. The fiber is extremely strong and robust yet feels soft and smooth. It is among the most precious wools.

PRECIOUS FIBERS / ESPECIALLY WARM AND SOFT / FROM THE ANDES OF PERU

Yak

The Yak comes from the Himalayas and lives in the high mountain regions of central Asia on altitudes of up to 6.000 meters. Yak are exceptionally resilient and are the base of existence for the domestic mountain nomads. The wool of the Yak is among the precious wools. Due to its fibre structure it warms even at freezing temperatures.

17822-8859 Yak  
cork sole, Sizes 36-46

17727-4859 Yak  
leather sole, Sizes 36-46

Camel

Camels can live in regions that are considered extreme and unlivable. They can withstand massive temperature fluctuations (+50°C to -30°C) without big problems. Also, they can live without water for weeks. Therefore, they are known as true survivors in the desert. Their wool is a precious wool and known for its beautiful color and its smooth fineness.

magicfelt

A PIECE OF NATURE ON YOUR FEET

Magicfelt is much more than a material, it is a fascinating concept. Airy wool offers relaxation through its natural heat balance. Selected virgin wool fibers are processed in pure mountain water means pure nature. A stylish, anatomical shape in combination with archaic basic colors in double-face design creates a fascinating look. The most natural slipper in the world. **Made in Austria.**

THE CONCEPT OF MAGICFELT

**Design:** The age-old shape and felted edges signal a bold reduction to the most innate of designs, appealing directly to the emotions.

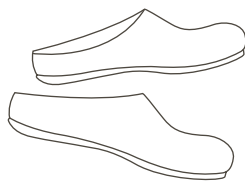

**Lightweight:** Magicfelt slippers weigh just 89 g (in a size 38). And that's a world record. It's like walking on air.

**Doubleface:** The two-tone doublefaced look, made from seamless, anatomically shaped felted wool, is characteristic of Magicfelt. The resulting footwear, finished with the highest level of crafts manship, is captivating.

**The perfect fit:** Both the felt and the soles are shaped for anatomically perfect comfort. There is no better fit – Magicfelt is seamlessly unique.

STEGMANN.  
1888

STEGMANN IS LIKE COMING HOME

We are never more at one with nature and with our bodies than when we are walking. Come home to shoes that offer unrivalled support, to shoes that can soothe your weary feet and restore your sense of wellbeing like no other – come home to Stegmann. Open the door and see them awaiting you like a faithful friend.

INVENTOR OF THE NATURAL FELT CLOG

Unadulterated nature: The Stegmann felt clog is made from pure natural materials. Sheep's wool, cork and natural latex enfold your foot in the most natural of ways. The footwear is produced exclusively in Tyrol, in harmony with nature.

**The seamless felt:** Pure sheep's wool of the highest quality is seamlessly and anatomically felted using Tyrol mountain water with no chemical additives. Only Stegmann are masters of this craft.

**Breathable:** Felt is the warmest of materials, but wool conducts moisture to the outside in the warmer seasons and cools the feet completely naturally.

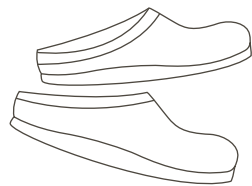

**The perfect fit:** The anatomically raised heels ensure the foot is pleasantly and seamlessly enclosed. Connoisseurs recommend Stegmann, the Original.

**Comfort:** The combination of the seamless, anatomically shaped felt and the special Stegmann cork soles provide your feet with the maximum of comfort.

**Cork-latex footbed:** The footbed is extremely flexible, having the perfect shape with its transverse and longitudinal arches and toe grip, ensuring a unique level of wearing comfort.

# Wollfilz Clog 108

Model 108 - Stegmann's legendary comfort-shoe. Recommended by generations of customers, the model 108 is now the icon of feltclogs. RECYCLED LINEN / EASY ON AND OFF / DECORATIVE JUTE BAND

# Men Espadrilles

These brand-new sailing shoes made from GRS certified recycled linen not only look stylish but also provide a secure grip with their non-slip rubber sole on any surface. The sole combined with a jute band, gives the model a unique look. The linen sailing shoe offers a modern and sporty casual look.

# Our promise to mother nature.

**Regional production:** Tyrol is our home and where our heart beats. That is why the entire manufacturing from product development through the production of fabrics and slippers to the packaging and logistics is made by our staff in Tyrol. Since our foundation in 1926 we are committed to local production and craftsmanship made in Austria.

**In harmony with nature:** The use of regrowing materials allows us to craft products that are in harmony with nature. Our focus on local wools and resources ensures short transportation. All our wool-waste is recycled through a special method that allows us to re-integrate it into our processes. Also, surplus energy from our production processes is stored and reintegrated to minimize our eco-footprint. Therefore, our lean cycle is without waste.

**Protecting endangered sheep breeds:** While the world only speaks about merino wools, local endangered sheep breeds and farmers are largely left behind. Our commitment is to protect those endangered species and support their farmers by purchasing their wools. We already protect eight species with and craft beautiful slippers directly from mother nature.

All our products are  
produced carbon-neutrally.
